Recombinant antigen ospC for *Borrelia burgdorferi*

**CATALOG NUMBER:** RAG0043

**RECOMBINANT ANTIGEN:** the outer surface protein C (OspC) of *Borrelia burgdorferi* (Lagal et al., 2003).

**DESCRIPTION:** the *Borrelia burgdorferi* antigen OspC has been prepared as a recombinant antigen fused to a his-tag in its N-terminus.

**PRESENTATION:** liquid protein solution

**SOURCE:** Escherichia coli

**MOLECULAR WEIGHT:** determined by SDS-PAGE, the protein band is between molecular markers of 25,000 and 35,000 Da, while relative molecular mass calculated from amino acid sequence is 27,887.3 Da.

**BATCH COMPOSITION:**

<table>
<thead>
<tr>
<th>COMPONENTS</th>

<tbody>
<tr>
<td>his-ospC</td>
<td>recombinant antigen with a his-tag in its N-terminus</td>
</tr>
<tr>
<td>Storage buffer</td>
<td>20 mM phosphate buffer pH 7 and 0.15 M NaCl</td>
</tr>
</tbody>
</table>

**QUALITY CONTROL:**

1. **PROTEIN CONCENTRATION DETERMINED ESPECTROPHOTOMETRICALLY**

   ![Graph](image)

   y = 0.0121x + 0.0872
   R² = 0.9989

   This protein does not contain any Trp residues. Experience shows that this could result in more than 10% error in the computed extinction coefficient. Therefore, we have measured the protein concentration by using the colorimetric assay based on the interaction between Coomassie brilliant blue and the arginine and aromatic residues (Bradford Method) and its maximum absorption shifts from 470 nm to 595 nm. The standard curve was performed with the protein BSA. 5 µl of the protein were analysed.

   DO595 = 0.885
   CONCENTRATION: 1.725 mg/ml

2. **PURITY CONTROL IN SDS-PAGE: 15%**

   ![SDS-PAGE Image]
   Figure 1. SDS-PAGE analysis (15%) of 1 µl of recombinant ospC. Purity is > 95% as determined by gel electrophoresis. Bands which slightly appear under the main band correspond to this same protein as it is showed in a western blot performed with a his-tag monoclonal antibody.

3. **ABSENCE OF PRECIPITATION AFTER A FREEZING AND THAWING CYCLE:** ok

**LOT SPECIFICATIONS:**

1. **CONCENTRATION:** 1.725 mg/ml
2. **TOTAL QUANTITY PER ALIQUOT:** 1 mg
3. **TOTAL VOLUME PER ALIQUOT:** 0.61 ml
4. **STORAGE:** Protein is shipped with dry ice. Upon arrival, it should be aliquoted in order to avoid repeated freezing and thawing cycles and stored at -20°C to -80°C.
5. **APPLICATIONS:** not tested. Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates.
6. **OBSERVATIONS:** Proteins should be maintained frozen at high concentrations. The dilution to be performed for ELISA assays should be made with a small quantity of protein, the same day of the experiment. In order to defrost the protein, maintain the aliquot at 25°C without shaking to avoid aggregation. Prior making test dilutions and after defrost the protein, is recommended to remove possible protein aggregates by centrifuging the stock solution, avoiding alterations in the immobilization of the biomolecule to the solid surface.

BIBLIOGRAPHY:

Important Notes: During shipment, small volumes of product will occasionally become entrapped in the seal of the product vial. For products with volumes of 200 µl or less, we recommend gently tapping the vial on a hard surface or briefly centrifuging the vial in a tabletop centrifuge to dislodge any liquid in the container cap.

Although recombinant antigens are expressed in non-pathogenic E. coli and bacterial integrity is destroyed during purification, the antigen preparation should be handled as potentially infectious.
